Amendment
Attorney Docket No. E30.2N-8146-US10

Amendments To The Claims:

Claims 1-58 Cancelled.

59. (Previously Presented) A combination multiple warning signal light and motorized vehicle, the combination multiple warning signal light and motor vehicle comprising:
- a) a plurality of strip light emitting diode light sources engaged to an exterior of said vehicle;
 - b) a plurality of light emitting diodes arranged about and attached to each strip light emitting diode light source; and
 - c) a controller in electric communication with the light emitting diodes, the controller regulating the illumination of light signals which are independent of a turn light signal and a brake light signal, the controller constructed and arranged to selectively activate the light emitting diodes thereby producing at least two different types of visually distinct warning light signals, said light emitting diodes receiving power from a power source.
60. (Previously Presented) The combination of claim 59, each of said strip light emitting diode light sources comprising a back side having an affixation member.
61. (Previously Presented) The combination of claim 60, wherein the controller independently controls the light emitting diodes on different strip light emitting diode light sources.
62. (Previously Presented) The combination of claim 61, wherein the warning light signal is a directional indicator.
63. (Previously Presented) The combination of claim 61, wherein the motorized vehicle is a utility vehicle.
64. (Previously Presented) The combination of claim 61, wherein the motorized vehicle is an emergency vehicle.
65. (Previously Presented) The combination of claim 61, further comprising a cover enclosing said light emitting diodes.
66. (Previously Presented) The combination of claim 59 wherein said controller is constructed and arranged to produce at least two different types of visually distinct warning light signals in at least one combination.
67. (Previously Presented) The combination of claim 66, said at least one combination

comprising at least one pattern of visually distinct warning light signals.

68. (Previously Presented) The combination of claim 66, said at least one combination comprising at least one sequence of visually distinct warning light signals.

69. (Previously Presented) The combination of claim 67, wherein said pattern of light signals is repeating.

70. (Previously Presented) The combination of claim 67, said pattern of light signals comprising repeated illumination of one of said visually distinct warning light signals for at least two occurrences.

71. (Previously Presented) The combination of claim 67, said pattern of light signals comprising repeated illumination of one of said visually distinct warning light signals for at least two occurrences and subsequent repeated illumination of another of said visually distinct warning light signals for at least two occurrences.

72. (Previously Presented) The combination of claim 67, wherein said at least two different types of visually distinct warning light signals are illuminated in any combination to form said pattern.

73. (Previously Presented) The combination of claim 66, wherein said at least two different types of visually distinct warning light signals are generated in a regular pattern.

74. (Previously Presented) The combination of claim 66, wherein said at least two different types of visually distinct warning light signals are generated in an intermittent pattern.

75. (Previously Presented) The combination of claim 66, wherein said at least two different types of visually distinct warning light signals are generated in an irregular pattern.

76. (Previously Presented) The combination of claim 59, wherein said controller is constructed and arranged to produce at least two different types of visually distinct warning light signals simultaneously.
